

If you can use Google Maps™, you can use DNAOps™.

## Why Choose DNAOps™?

If you can use Google Maps™, you can use DNAOps™.

DNAOps™ is a highly secure cloud-based, crime tracking system allowing authorized users to enter, visualize and access information about firearm-related crimes, forensic test results and armed criminals using Google Maps.

Quickly uncover associations between crimes with similar time period, location and case characteristics. Search from any device and organizes data logically so that it can be used to generate actionable information of tactical and strategic crime-solving value.

## DNAOps™ Delivers Results

- 🔗 comprehensive and relevant data collection
- 🔗 unlimited reach and range for cross-jurisdictional information sharing
- 🔗 immediate visualization of crime patterns and "hotspots"
- 🔗 rapid connections between crimes, evidence and suspects
- 🔗 improved lead generation to advance investigations
- 🔗 timely identification of violent criminals to stop them before they can re-offend

## DNAOps™ Saves Time

DNAOps™ can help your agency optimize the thorough and systematic investigation for any crime where DNA was collected from a suspect:

- 🔗 Technicians can map any incident in which "workable" DNA was found to help link people, objects and locations with other relevant data.
- 🔗 Detectives can get the timely information they need to advance their investigations and identify armed and violent suspects.
- 🔗 Prosecutors can get quality information that rises to the level of admissible evidence in order to convict the guilty.
